

Quickstart Guide

1.- Include the Obi package in your project. Right click in the project window, "Import Package" "Custom Package", then select Obi.unitypackage.

2.- An installer window will then pop up. Clicking "Install" will automatically perform the required installation steps.

3.- Go to GameObject->3D object->Obi->Obi Emitter (with solver). This will create an Obi Emitter object, a disk shape and a solver, all properly set up.

4.- Set any of the included emitter materials to your emitter's "Emitter material" property. You're done!

For further information, please refer to the [Manual](#).
